

# Reasoning About Number

There are 8 pages of target activities, two pages for 'Make 10', two for 'Make 21', two for 'Make 50' and two for 'Make 100'.

$$\square + \square + \square =$$

$$\square + \square - \square =$$

The next 8 pages contain the blank templates based on these 8 main activities. These templates will allow you to create your own target activities.

$$\square \times \square + \square =$$

$$\square \times \square - \square =$$

To make production easier, simply use number cards in the blank spaces at the end of each number sentence.

All 8 templates are shown on the right. Why not print this page and use it for planning.

$$\square \times \square + \square \square =$$

$$\square \times \square \square + \square =$$

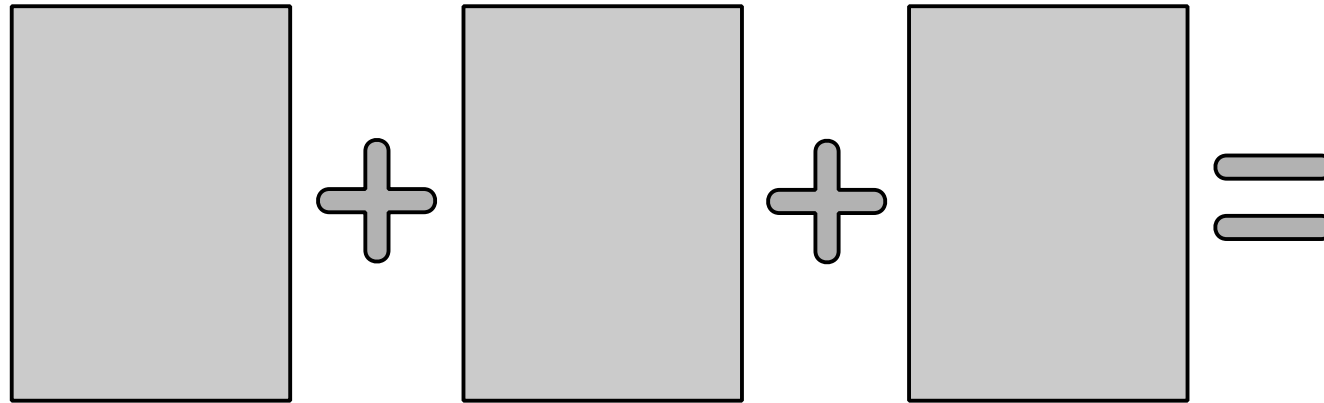

You will notice that the boxes to hold number cards have been moved to the top of each page. This is to provide recording space on the sheet.

$$\square \times \square \square + \square =$$

$$\square \times \square + \square \square =$$
